Use Case Description - ID Company Information

UC-01: Publish company story

Actor: Interior designer
Preconditions: The designer is logged in to the admin area.
Trigger: The designer wants clients to understand the company's design philosophy.

Main flow

- The designer opens the Company Story editor.
- The designer enters the company story and design philosophy, and optionally adds an image.
- The designer previews the page.
- The designer selects Publish.
- The system saves the content and shows it on the public About page.

Alternative flows

- 2a. A required field is empty: the system highlights it and blocks publishing.
- 4a. The designer selects Save as draft: the system saves the content without showing it to visitors.

Postcondition: The story is visible to all visitors.

UC-02: List services

Actor: Interior designer
Preconditions: The designer is logged in.
Trigger: The designer wants clients to know what the company can handle.

Main flow

- The designer opens Services and selects Add service.
- The designer enters a title and description.
- The designer saves and publishes the service.
- The system adds it to the public Services page.
- The designer repeats steps 1–4 and sets the display order.

Alternative flows

- 2a. The title duplicates an existing service: the system asks the designer to change it.
- 3a. The designer edits or unpublishes an existing service: the page updates straight away.

Postcondition: The Services page lists all published services in order.

UC-03: Upload project photos

Actor: Interior designer
Preconditions: The designer is logged in, and the project exists.
Trigger: A project is complete, and the designer wants to show the results.

Main flow

- The designer selects a project and chooses “Upload photos”.
- The designer selects one or more image files.
- The system checks file type and size, then uploads the images.
- The designer adds captions, sets a cover photo and orders the photos.
- The designer publishes the gallery.
- The system shows the photos in the portfolio.

Alternative flows

- 3a. A file is too large or in an unsupported format: the system rejects that file and uploads the rest.
- 3b. The upload is interrupted: the system keeps the files already uploaded and lets the designer retry.

Postcondition: The project photos appear in the public portfolio.

UC-04: Create project case study

Actor: Interior designer
Preconditions: The project exists and has at least one photo.
Trigger: The designer wants to show how a project was delivered.

Main flow

- The designer opens a project and selects Create case study.
- The designer enters the client brief, the design approach and the outcome.
- The designer links the services used and chooses the photos to feature.
- The designer previews the page.

- The designer publishes it.
- The system creates a case study page linked from the project in the portfolio.

Alternative flows
- 3a. No photos are linked: the system warns the designer but allows publishing.
- 5a. The designer saves as draft and returns later to finish.

Postcondition: The project has a public case study page.

UC-05: Create designer profile

Actor: Interior designer
Preconditions: The designer is logged in.
Trigger: The designer wants clients to feel confident choosing them.

Main flow
- The designer opens My Profile.
- The designer enters a name and bio, and uploads a profile photo.
- The designer adds their speciality and the projects they have led.
- The designer saves and publishes the profile.
- The system shows it on the public Designers page.

Alternative flows
- 2a. The photo is the wrong format: the system asks for a different file.
- 4a. The designer saves as draft: the profile stays hidden.

Postcondition: The profile is visible to visitors.

UC-06: Publish testimonials

Actors: Interior designer (primary), Client (supplies the review)
Preconditions: At least one client review has been submitted and is pending.
Trigger: The designer wants to build trust with new visitors.

Main flow
- The designer opens the Testimonials queue.
- The system lists reviews with the status Pending.
- The designer reads a review and selects Approve.
- The system sets the status to Approved and shows the review on the website, linked to its project.

Alternative flows
3a. The designer selects Reject: the review stays stored but is never shown.
3b. The designer corrects a typo before approving: the system saves the edited text.

Postcondition: Only approved reviews are visible to visitors.

UC-07: Set consultation availability

Actor: Interior designer
Preconditions: The designer is logged in.
Trigger: The designer wants clients to book without email exchanges.

Main flow
- The designer opens Availability.
- The designer selects dates and time ranges, and sets the slot length.
- The designer saves.
- The system creates the open slots and shows them in the booking calendar.

Alternative flows
- 3a. A new slot overlaps an existing one: the system rejects it and highlights the clash.
- 4a. The designer removes a slot that is already booked: the system asks them to cancel the consultation first.

Postcondition: Clients can see and book the open slots.

UC-08: Manage enquiry inbox

Actors: Interior designer (primary), Client (sent the enquiry)
Preconditions: A client has submitted an enquiry form.
Trigger: The system notifies the designer of a new enquiry.

Main flow
- The designer opens the Enquiry inbox.
- The system lists enquiries, newest first, with status New.
- The designer opens an enquiry and reads the message and client details.
- The designer writes and sends a reply.
- The system emails the reply to the client and sets the status to Replied.

Alternative flows
- 4a. The designer marks the enquiry as spam or Closed without replying.
- 5a. The email fails to send: the system shows an error and keeps the status as New.

Postcondition: All enquiries are in one inbox, each with a clear status.

UC-09: Publish design process

Actor: Interior designer
Preconditions: The designer is logged in.
Trigger: The designer wants clients to arrive with realistic expectations.

Main flow

- The designer opens Design Process.
- The designer adds a step with a title and description.
- The designer repeats step 2 for each stage and arranges them in order.
- The designer publishes.
- The system shows the numbered steps on the public Process page.

Alternative flows

- 3a. The designer reorders or deletes a step: the numbering updates automatically.
- 4a. No steps exist: the system blocks publishing.

Postcondition: The process is visible as an ordered list.

UC-10: View contact details

Actor: Prospective client
Preconditions: None. The page is public.
Trigger: The client wants to reach the office.

Main flow

- The client opens the Contact page from the menu.
- The system shows the address, phone number, email and opening hours.
- The client chooses a way to get in touch.

Alternative flows

- 3a. On mobile, the client taps the phone number to call or the email to write.
- 3b. The client wants to visit: the client opens the address in a map app.

Postcondition: The client has the information needed to reach the office.
