Use Case Descriptions – Customer Project Interaction

UC30 Search Projects by Category

Actor	Customer
Description	Allows the Customer to search for interior design projects based on different categories.
Trigger	Customer wants to search for projects by category.
Preconditions	There are available projects with category tags in the system.
Postconditions	Projects matching the selected categories are displayed.

Main Flow

1. Customer clicks “Search Projects” on the project browsing page.
2. System displays the available categories.
3. Customer selects the categories they are interested in and clicks “Search”.
4. System searched for projects matching the selected categories.
5. System displays the matching projects.

Alternative Flow

- 4a) No matching projects are found. The system displays “No matching projects found” and allows the Customer to change the selection.

UC31 View Project Details

Actor	Customer
Description	Allows the Customer to view more information about a project before deciding if it suits their needs.
Trigger	Customer selects a project from the project listing.
Preconditions	Customer must be logged in and the project must belong to an active ID. The selected project exists and is available for viewing.
Postconditions	The project details are displayed to the Customer.

Main Flow

1. Customer selects a project from the project listing.
2. System retrieves the selected project’s information.
3. System displays the project's title, description, photos, categories, location, completion information and ID information.
4. Customer views the project details.

Alternative Flow

- 2a) The project has been removed, is inactive, or belongs to an inactive interior designer. The system displays “Project unavailable” and returns to the project listing.

UC32 Save Project to Favourites

Actor	Customer
Description	Allows the Customer to save projects they like so they can easily find them again.
Trigger	Customer selects “Add to Favourites” on a project.
Preconditions	The Customer is logged in and the project is available.
Postconditions	The project is added to the Customer’s favourite list.

Main Flow

1. Customer selects “Add to Favourites” on a project.
2. System checks if the project is already saved.
3. System adds the project to the Customer’s favourite list.
4. System displays “Project added to favourites”.

Alternative Flow

- 2a) The project is saved. The system displays “Project already in favourites”.

Exception Flow

- E1) The project cannot be saved due to a system error. The system displays “Unable to save project. Please try again.”.

UC33 Remove Project from Favourites

Actor	Customer
Description	Allows the Customer to remove projects they no longer want in their favourites list.
Trigger	Customer selects “Remove from Favourites” on a saved project.
Preconditions	The Customer is logged in and the project is in their favourites list.
Postconditions	The project is removed from the Customer’s favourites list.

Main Flow

1. Customer opens their favourites list.
2. System displays the saved projects.
3. Customer selects a project and clicks “Remove from Favourites”.
4. System removes the project from the favourites list.
5. System displays “Project removed from favourites” and updates the list.

Alternative Flow

- 4a) The project is no longer in the favourites list. The system displays “Project not found in favourites” and refreshes the list.

Exception Flow

- E1) The project cannot be removed due to a system error. The system displays “Unable to remove project. Please try again.”.

UC34 View Saved Projects

Actor	Customer
Description	Allows the Customer to view all the projects they have saved in their favourites list.
Trigger	Customer selects “My Favourites” on their account page.
Preconditions	The Customer is logged in.
Postconditions	The Customer’s available saved projects are displayed.

Main Flow

1. Customer selects “My Favourites”.
2. System retrieves the Customer’s saved projects.
3. System displays the saved projects with their titles and preview images.
4. Customer browses through the saved projects.

Alternative Flow

- 2a) The Customer has not saved any projects. The system displays “No saved projects found”.
- 2b) A saved project is no longer available. The system does not display that project in the list.

UC35 Send Project Enquiry

Actor	Customer
Description	Allows the Customer to send an enquiry to an ID to ask for more information about a project or their services.
Trigger	Customer selects “Send Enquiry” on a project’s details page.
Preconditions	The Customer is logged in and selected project is available.
Postconditions	The enquiry is saved and sent to the ID.

Main Flow

1. Customer selects “Send Enquiry” on a project.
2. System displays the enquiry form.

3. Customer enters their message and clicks “Submit”.
4. System checks that the required information is provided.
5. System saves the enquiry and sends it to the ID.
6. System displays “Enquiry sent successfully”.

Alternative Flow

- 3a) Customer selects “Cancel”. The system returns to the project details page without sending the enquiry.
- 4a) The enquiry message is empty or invalid. The system displays an error message and asks the Customer to try again.

Exception Flow

- E1) The enquiry cannot be sent due to a system error. The system displays “Unable to send enquiry. Please try again.”.

UC36 Request Quotation

Actor	Customer
Description	Allows the Customer to request a quotation from one or more IDs to get an idea of the renovation costs.
Trigger	Customer selects “Request Quotation”.
Preconditions	The Customer is logged in and there are available IDs on the platform.
Postconditions	The quotation request is saved and sent to the selected IDs.

Main Flow

1. Customer clicks “Request Quotation”.
2. System displays the quotation request form.
3. Customer selects one or more IDs and enters their renovation requirements and budget.
4. Customer clicks “Submit”.
5. System checks that all required information is provided.
6. System saves the request and sends it to the selected IDs.
7. System displays “Quotation request submitted successfully”.

Alternative Flow

- 4a) Customer clicks “Cancel”. The system closes the form without submitting the request.
- 5a) Required information is missing or invalid. The system displays an error message and asks the Customer to correct it.
- 5b) No ID is selected. The system asks the Customer to select at least one ID.

Exception Flow

- E1) The request cannot be submitted due to a system error. The system displays “Unable to submit quotation request. Please try again.”.

UC37 Report Inappropriate Project

Actor	Customer
Description	Allows the Customer to report projects with inappropriate content so the Platform Manager can review them.
Trigger	Customer selects “Report Project” on a project’s details page.
Preconditions	The Customer is logged in and the selected project is available.
Postconditions	The report is saved with a pending status for the Platform Manager to review.

Main Flow

1. Customer selects “Report Project”.
2. System displays the reporting form.
3. Customer selects a reason for the report and may enter additional details.
4. Customer clicks “Submit Report”.
5. System checks that the required information is provided.
6. System saves the report and marks it as pending review.
7. System displays “Report submitted successfully”.

Alternative Flow

- 4a) Customer clicks “Cancel”. The system closes the form without saving the report.
- 5a) No reason is selected. The system asks the Customer to select a reason before submitting.
- 5b) The selected reason is invalid or the additional details exceed 1,000 characters. The system displays an error message and asks the Customer to correct the information.
- 5c) The selected project is no longer available. The system displays “Project unavailable” and returns to the project listing.

Exception Flow

- E1) The report cannot be submitted due to a system error. The system displays “Unable to submit report. Please try again.”.

UC38 View Personalised Project Recommendations

Actor	Customer
Description	Allows the Customer to discover projects they might like based on projects they have viewed or saved before.
Trigger	Customer opens the project browsing page.
Preconditions	The Customer is logged in and there are available projects in the system.
Postconditions	Recommended projects are displayed to the Customer based on their interests.

Main Flow

1. Customer opens the project browsing page.
2. System retrieves the Customer's previously viewed and saved projects.
3. System uses this information to identify the Customer's preferences.
4. System finds other available projects that match these preferences.
5. System displays the suggested projects under "Recommended for You".

Alternative Flow

- 3a) The Customer does not have enough browsing or favourites history. The system displays general project recommendations instead.
- 4a) No projects match the Customer's preferences. The system displays general project recommendations instead.

Exception Flow

- E1) The recommendations cannot be loaded due to a system error. The system displays "Recommendations unavailable. Please try again later.".
