Use Case Description - ID Company Information

UC-15 Publish Company Story

Actor	Interior designer (ID)
User story	As an ID, I want to publish our company story so that customers understand our design philosophy
Description	The ID writes and publishes the company story and design philosophy on the website
Preconditions	The ID is logged in
Postconditions	The company story and design philosophy are published and visible to visitors.

Main flow:

1. The ID selects "Company story" as the content type from the dashboard.
2. The system shows the editor form with the current story and philosophy.
3. The ID enters or edits the story and design philosophy.
4. The ID submits the content.
5. The system checks that the required fields are complete.
6. The system shows a preview.
7. The ID confirms and publishes.
8. The system saves the content, sets its status to published and shows that the page is live.

Alternative flows:

- 6a. The ID is not happy with the preview and returns to the editor (step 3).

Exceptions:

- 5a. A required field is empty. The system shows the missing fields and the flow resumes at step 3.
- 8a. Saving fails: The system shows an error and keeps the ID's text so it is not lost.

UC-16 List Services

Actor	Interior designer (ID)
User story	As an ID, I want to list our services so that customers know what we can handle
Description	The ID adds the services the firm offers, each with a name and description, and publishes them on the Services page
Preconditions	The ID is logged in
Postconditions	The service list is published and visible to visitors

Main flow:

1. The ID selects "Services" as the content type.
2. The system shows the service list and an empty form for a new service.
3. The ID enters the service name and description.
4. The ID submits the form.
5. The system checks the required fields.
6. The system shows a preview of the Services page.
7. The ID confirms and publishes.
8. The system saves the service, sets it to published and shows that the page is live.

Alternative flows:

- 3a. The ID edits or removes an existing service instead of adding one. The flow continues from step 4.
- 3b. The ID adds several services in a row by repeating steps 3 and 4 before publishing.

Exceptions:

- 5a. The name or description is empty. The system shows the missing fields and the flow resumes at step 3.

UC-17 Display Project Budget Range

Actor	Interior designer (ID)
User story	As an ID, I want to display the budget range of each project so that customers can estimate their own costs
Description	The ID enters a minimum and maximum budget for a project so the range appears on the project's page
Preconditions	● The ID is logged in ● The project exists in the system
Postconditions	The budget range is saved with the project and shown to visitors

Main flow:

1. The ID opens the project from the dashboard.
2. The system shows the project form with its budget fields.
3. The ID enters the minimum and maximum budget.
4. The ID submits the form.
5. The system checks that both amounts are numbers and that the minimum is not higher than the maximum.
6. The system shows a preview of the project with its budget range.
7. The ID confirms and publishes.
8. The system saves the range and shows that the project page is live.

Alternative flows:

- 3a. The ID changes an existing range. The flow continues from step 4.

Exceptions:

- 5a. An amount is not a number, or the minimum is higher than the maximum. The system shows the error and the flow resumes at step 3.

UC-18 Create Case Study Page

Actor	Interior designer (ID)
User story	As an ID, I want to create a case study page for each project so that customers can see how I deliver results
Description	The ID creates a case study page for a project, describing the challenge, the solution, the result and the project images
Preconditions	● The ID is logged in ● The project exists in the system
Postconditions	The project has a published case study page

Main flow:

1. The ID selects "Case study" as the content type and chooses the project.
2. The system shows the case study form.
3. The ID enters the challenge, solution and result, and adds images.
4. The ID submits the form.
5. The system checks the required fields.
6. The system shows a preview of the case study page.
7. The ID confirms and publishes.
8. The system saves the case study, links it to the project and shows that the page is live.

Extension point:

- Display project budget range (UC-17). The budget range appears on the case study page when the project has one.

Alternative flows:

- 6a. The ID returns to the editor to change the text or images (step 3).

Exceptions:

- 5a. A required field is empty. The system shows the missing fields and the flow resumes at step 3.
- 5b. An image has an unsupported type or is too large. The system rejects it, and the flow resumes at step 3.

UC-19 Create Designer Profile

Actor	Interior designer (ID)
User story	As an ID, I want to create my designer profile so that customers feel confident choosing me
Description	The ID creates a public profile with name, photo, bio and qualifications
Preconditions	The ID is logged in
Postconditions	The designer profile is published and visible to visitors

Main flow:

1. The ID selects "Designer profile" as the content type.
2. The system shows the profile form.
3. The ID enters name, bio, qualifications and email, and uploads a photo.
4. The ID submits the form.
5. The system checks the required fields and the photo.
6. The system shows a preview of the profile.
7. The ID confirms and publishes.
8. The system saves the profile and shows that the page is live.

Alternative flows:

- 3a. The ID updates an existing profile instead of creating a new one. The flow continues from step 4.

Exceptions:

- 5a. A required field is empty, or the photo has an unsupported type or is too large. The system shows the problem and the flow resumes at step 3.

UC-20 Publish Approved Customer Reviews

Actor	● Interior designer (ID) ● Past customer (secondary, submits the review)
User story	As an ID, I want to publish approved customer reviews so that new visitors trust our work
Description	A review submitted by a past customer stays hidden until the ID approves it. Only approved reviews appear on the website
Preconditions	● The ID is logged in ● A past customer has submitted a review, and the system has saved it with status "pending"
Postconditions	● If approved, the review is published and visible to visitors. ● If rejected, the review stays hidden.

Main flow:

1. The system alerts the ID that a review is waiting for approval.
2. The ID opens the pending review.
3. The system fetches and shows the review details (rating, comment, submission date).
4. The ID chooses "Approve".
5. The system sets the review status to "approved".
6. The system publishes the review, displays a success notification message, and returns the ID to the pending review list (where the approved review is now cleared).

Alternative flows:

- 4a. The ID chooses "Reject". The system sets the status to "rejected", displays a confirmation message, removes it from the pending list, and keeps the review hidden from visitors.
- 4b. The ID leaves the review pending and returns to it later.

Exceptions:

- 3a. The review can no longer be loaded. The system shows an error, and the review remains pending.

UC-21 Set Consultation Available Times

Actor	Interior designer (ID)
User story	As an ID, I want to set my available consultation times so that customers can book without email exchanges
Description	The ID creates time slots in the availability calendar. Customers can book these slots on the website
Preconditions	The ID is logged in
Postconditions	The new slots are saved and shown to customers as open

Main flow:

1. The ID opens the availability calendar.
2. The system shows the current slots.
3. The ID selects a date, a start time, and a slot duration (e.g., 1 or 2 hours). The system automatically calculates the end time.
4. The ID saves the slot.
5. The system checks that the slot is in the future and does not overlap another slot.
6. The system stores the slot as open, displays a success notification message, and updates the availability calendar view.

Alternative flows:

- 3a. The ID deletes an open (unbooked) slot. The system removes the slot from the calendar and refreshes the display.
- 3b. The ID adds several slots by repeating steps 3 to 6.

Exceptions:

- 5a. The slot is in the past or overlaps another slot. The system shows the error and the flow resumes at step 3.
- 5b. The ID tries to delete a booked slot. The system refuses the deletion, shows an error message, and the slot stays on the calendar.

UC-22 Receive Enquiries in One Inbox

Actor	● Interior designer (ID) ● Prospective customer (secondary, sends the enquiry)
User story	As an ID, I want to receive customer enquiries in one inbox so that I can respond quickly
Description	Every enquiry and consultation booking goes to a single inbox, where the ID reads it and replies
Preconditions	● The ID is logged in ● A customer has submitted an enquiry or booked a consultation, and the system has saved it in the inbox
Postconditions	The enquiry is marked as read and as replied if the ID wrote a reply

Main flow:

1. The system alerts the ID about a new enquiry.
2. The ID opens the inbox and selects the enquiry.
3. The system shows the customer's message and details, including any booked slot.
4. The ID writes a reply.
5. The system sends the reply to the customer.
6. The system marks the enquiry as replied.

Alternative flows:

- 4a. The ID only reads the enquiry and marks it as read, replying later.
- 2a. Several enquiries are waiting. The ID opens them one at a time, newest first.

Exceptions:

- 5a. The reply cannot be delivered. The system flags the enquiry so the ID can try again.

UC-23 Publish Design Process

Actor	Interior designer (ID)
User story	As an ID, I want to publish our design process so that customers arrive with realistic expectations
Description	The ID describes the firm's design process as an ordered list of steps and publishes it on the website
Preconditions	The ID is logged in
Postconditions	The design process steps are published, in order, and visible to visitors

Main flow:

1. The ID selects "Design process" as the content type.
2. The system shows the current steps and an empty form for a new step.
3. The ID enters the step number, title and description.
4. The ID submits the form.
5. The system checks the required fields.
6. The system shows a preview of the process page.
7. The ID confirms and publishes.
8. The system saves the steps, sets them to published and shows that the page is live.

Alternative flows:

- 3a. The ID edits, reorders or removes an existing step. The flow continues from step 4.
- 3b. The ID adds several steps by repeating steps 3 and 4 before publishing.

Exceptions:

- 5a. A title or description is empty. The system shows the missing fields and the flow resumes at step 3.

UC-24 View Company Contact Details

Actor	Prospective customer
User story	As a prospective customer, I want to view the company's contact details so that I can reach the office easily
Description	A visitor opens the contact page to see the firm's address, phone number and email
Preconditions	● The website is available. The visitor does not need to log in ● The ID has published the contact details
Postconditions	The visitor has seen the contact details

Main flow:

1. The visitor opens the contact page.
2. The system retrieves the company's address, phone number and email.
3. The system displays the contact details and the enquiry form.
4. The visitor reads the details and uses them to contact the office.

Extension point:

- Send enquiry: At step 4, the visitor may fill in the enquiry form instead, and the Send Enquiry flow takes over (see UC-22).

Alternative flows:

- 4a. The visitor leaves the page after reading the details.

Exceptions:

- 2a. The contact details cannot be loaded. The system shows an error message and suggests trying again later.
